REC\_DS using C\_Week 7\_COD\_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Ravi is building a basic hash table to manage student roll numbers for quick lookup. He decides to use Linear Probing to handle collisions.

Implement a hash table using linear probing where:

The hash function is: index = roll\_number % table\_sizeOn collision, check subsequent indexes (i+1, i+2, ...) until an empty slot is found.

#### You need to:

Insert a list of n student roll numbers into the hash table. Print the final state of the hash table. If a slot is empty, print -1.

### **Input Format**

The first line of the input contains two integers n and table\_size, where n is the

number of roll numbers to be inserted, and table\_size is the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert into the hash table.

### **Output Format**

The output should print a single line with table\_size space-separated integers representing the final state of the hash table after all insertions.

If any slot remains unoccupied, it should be represented as -1.

Refer to the sample output for formatting specifications.

### Sample Test Case

```
Input: 47
    50 700 76 85
    Output: 700 50 85 -1 -1 -1 76
    Answer
    #include <stdio.h>
    #define MAX 100
    // You are using GCC
   void initializeTable(int table[], int size) {
      for (int i=0; i<size; i++) {
         table[i]=-1;
    }
    int linearProbe(int table[], int size, int num) {
      int index=num%size;
      int i=0;
      while (table[(index+i)%size]!=-1) {
         j++:
return (index+i)%size;
```

```
void insertIntoHashTable(int table[], int size, int arr[], int n) {
  for (int i=0; i<n; i++) {
    int pos=linearProbe(table,size,arr[i]);
    table[pos]=arr[i];
  }
}
void printTable(int table[], int size) {
  for (int i=0; i<size; i++) {
    printf("%d ", table[i]);
  }
}
int main() {
int n, table_size;
  scanf("%d %d", &n, &table_size);
  int arr[MAX];
  int table[MAX];
  for (int i = 0; i < n; i++)
     scanf("%d", &arr[i]);
  initializeTable(table, table_size);
  insertIntoHashTable(table, table_size, arr, n);
  printTable(table, table_size);
  return 0;
```

Status: Correct Marks: 10/10
